AFib can happen to anyone.

What is AFib? (or Atrial Fibrillation)
AFib is a heart rhythm problem that may or may not be noticeable as a racing, pounding or fluttering sensation.

What are the symptoms of AFib?
Common symptoms may include:
- Racing heart, fluttering or palpitations
- Fatigue, shortness of breath
- Lightheadedness

People with AFib are at greater risk for stroke.
AFib is linked with a 5x higher stroke risk.

Most people with AFib benefit from stroke protection.
If you have AFib, chances are you need protection.

Medications lower risks
Discuss your risk calculations with your healthcare provider.
